ST-230

www.rm-suttner.com

Maximum permissible pressure	350 bar / 35.0 MPa
Minimum pressure	80 bar / 8 MPa
Maximum flow rate	30.0 l/min
Water temperature permanently	95°C
Water temperature temporary	max. 150°C
Ambient temperature	bis max. 60°C
Inlet connector	G1/4 FT
Outlet connector	G1/4 FT
Weight	0.528 kg
Dimensions (W / H / D)	111,5 x 45,5 x 41
Max. solid material size	50µm

Abbreviations and symbols	
FT; MT	Female thread; male thread
G	Whitworth pipe thread according to DIN ISO 228, ident. BSP= British Standard Pipe
PRV	Pressure Relief Valve

Description

Pressure Relief Valve

The application purpose of the ST-230 PRV is to protect high-pressure devices from overpressure. The valve housing is made of forged brass. The PRV operates according to the principle of a direct-acting, spring-loaded proportional seat valve. The PRV is infinitely adjustable.

Intended use

The PRV is designed to relieve unwanted overpressure, i.e. pressure above the specified operating pressure, thus protecting the high-pressure device.

The PRV is designed for use with water-operated high-pressure systems such as high-pressure cleaners.

The PRV is approved only for use with Group II fluids as per 2014/68/EU. This can include, for instance, water and diluted commercially available cleaning or disinfection agents. For further details, please refer to Guideline EGV 1272/2008. All safety regulations and rules for high-pressure washers apply as well, e.g. DIN EN 60335-79-2 and DIN EN 1829-1.

 **Dispensing flammable, explosive, caustic or toxic substances is forbidden!**

The PRV may not be used with abrasive substances.

To avoid damaging the PRV, install a fine filter with a recommended mesh size of 50 µm into the water inlet to the high-pressure pump.

Normative references

- The product is classed as a pressure-maintaining component within the terms of Pressure Equipment Directive 2014/68/EU. Due to the operating parameters, it comes under the scope of Article 4 / Paragraph 3 of this guideline ("good engineering practice") and therefore no Declaration of Conformity and CE marking are allowed!
- The product must not be installed in equipment complying with the Pressure Equipment Directive 2014/68/EU.
- The product is a standard part within the terms of Machinery Directive 2006/42/EC!

Symbols and their meanings

Hazard!

If these instructions are not followed there is a danger of physical injury, danger to life and material damage!

Please comply with the Operating Instructions!

Incorrect operation can lead to severe injury. Read the Operating Instructions before using the equipment.

Wear safety gloves!

Wear protective goggles!

Risk of injury due to high pressure!

Risk of injection or severe injury to persons. Keep clear of nozzle. Do not direct discharge stream at persons.

Description of imminent hazard and failure to avoid hazard will result death

Description of hazard and possible resulting injuries or death.

Description of hazard that could result in minor or moderate injury.

For your safety

This Suttner product is state of the art and complies with generally recognised health and safety regulations. Due to the high pressures and temperatures nonetheless there is the danger of material damage and injury for users and other persons. Please comply with these Operating Instructions at all times and the relevant regulations for liquid jet sprayers.

For details regarding personal protective equipment, refer to the local prevention regulations "Personal protective equipment". Personal protective equipment includes for example overalls, head protection, easy-grip protective gloves and non-slip boots, metatarsal foot protection, respiratory protection, ear protection, eye or face protection.

- Before starting work, check the high-pressure system (spray equipment, hoses, screw connectors, etc.) for signs of leakage and damage.
- Cease operation immediately if any leakage or malfunctions occur.
- Malfunctions that may affect safety are to be rectified immediately.
- The PRV may only be used in a technically perfect condition, unmodified in any way, for the purpose intended, in awareness of and compliance with safety requirements and potential hazards and when following these Operating Instructions. Any other or additional use is deemed inappropriate.
- All assembly or installation work must be carried out by authorised specialist personnel.
- Also comply with the operating instructions for equipment and accessories connected to the PRV and with the applicable regulations for cleaning agents.

Risk of injury due to spray medium!

Ensure the safe escape of the water in case of overpressure.

Risk of burning or scalding due to hot media!

Do not touch anything which is not insulated if you are working with consumables and additives where the temperature exceeds 45°C. Wear protective gloves!

Assembly

Delivery scope

The PRV is delivered unadjusted and unsealed. Lead seal and sealing wire are not included in the delivery.

Usage notes!

PRVs are high-quality fittings, which must be handled with particular care. The sealing surfaces on the seat and ball are smooth machined to achieve the necessary tightness. The penetration of foreign bodies into the valve must be avoided during assembly, installation and during operation. The tightness of a PRV can be impaired by hemp, Teflon tape or other sealant as well as by welding beads. Even rough treatment of the finished PRV during storage, transport and assembly may cause a PRV to leak. If the PRVs are painted, care must be taken that the sliding parts do not come into contact with paint.

ST-230 PRVs may be installed vertically or horizontally. The safety function of the valves is tested and confirmed in both installation positions. In order to ensure proper functioning of the PRVs, they must be installed in such a way that no impermissible static, dynamic or thermal stresses may act on the PRV. During assembly, ensure the maximum tightening torque is not exceeded. If the medium emerging from the outlet may directly or indirectly cause danger to persons or the environment, appropriate protective measures such as the installation of a protective hood or blow-off line must be carried out.

Risk of injury!

If the high-pressure system has been used with hot water, allow the equipment to cool down to below 45°C due to the risk of scalding or burning before starting assembly and maintenance work!

- Switch the high-pressure washer off before carrying out assembly work on the high-pressure system.
- Secure the high-pressure washer against being unintentionally switched on.
- Turn the water supply off.
- Ensure that system sections and lines to be opened are not under pressure.
- Check the flow direction before mounting!
- Seal the screw connectors in accordance with your intended use with an appropriate sealant such as Teflon sealing tape or a liquid sealant (see R+M Catalogue, Chapter 06, Adhesives and sealing materials).
- Ensure the equipment meets the requirements of the machine guideline after installing the PRV in a machine/system!

- If necessary, set up warning signs to prevent unintentional start-up of the equipment/machines/ systems!
- Carry out the assembly/repair work in accordance with the applicable safety and accident prevention regulations of the employers' liability insurance association!
- Check the correct functioning of the safety devices during commissioning!

Modification

No modifications of any kind are to be made to the PRV!

Setting

As outlined by DIN EN 60335-2-79, a PRV, when used as a safety device against inadmissible overpressure in high-pressure systems, must be set to a response pressure of 10% above the maximum operating pressure. Upon delivery, the valve is not set and must be adjusted and sealed by the manufacturer of the high-pressure system. To do this, proceed as follows:

The manufacturer of the high-pressure system is responsible for the correct setting and awareness of safety requirements and potential hazards during installation!

For safety reasons, the adjusting sleeve may not be screwed open further than 111.5 mm (dimension A)!

- Refer to the setting value for your device in the diagram.
- Unscrew the locknut and set the adjusting sleeve to the determined dimension.
- Use the locknut to secure the adjusting sleeve against twisting (10 Nm).
- Check the PRV for function. Apply the required overpressure to the PRV by means of a separate pump, which can produce the required response pressure and has its own safety device. Check the response pressure.
- Pass seal wire crosswise through AA-BB bores and secure both ends of the seal wire with a leaden seal.

A= Setting dimension
P= Response pressure

1 Adjusting sleeve
2 Locknut

Function chart

Operation

Operate the PRV only within the pressure, flow rate and temperature ranges indicated. Before starting work, check the values on the high-pressure generator and adjust these if necessary. After you have read the safety instructions, the PRV is remarkably easy to use.

Transportation and storage

Please ensure the PRV is cleaned and protected from contamination during transportation and storage. Protect the PRV against frost. The effect of frost can damage the PRV so badly that it no longer works perfectly.

Maintenance

Assembly, maintenance and repair work may only be carried out by persons trained in maintenance and repair work on high-pressure systems. Use only spare parts approved by Suttner GmbH. Only use high-pressure components (hoses, connectors, etc.) approved for the respective pressure and temperature range.

- Perform an annual exterior visual inspection to make sure the PRV is safe to use.
- Are the markings and inscriptions legible?
- Does the PRV leak?
- Does the PRV show signs of mechanical damage?

After max. 1000 operating hours or a year or if hot water (exceeding 95°C) and chemicals are used after 500 operating hours or 6 months: Check valve parts (O-rings, support rings, hose clips) for damage and if necessary replace completely with a Suttner repair kit.

After max. 3000 operating hours or 3 years or if hot water (exceeding 90°C) and chemicals are used after 1500 operating hours or 18 months: Replace valve parts (O-rings, support rings, hose clips) completely with a Suttner repair kit.

Disposal

Please dispose of old equipment in an environmentally friendly manner.

Old equipment contains valuable recyclable materials which should be salvaged for recycling. Please therefore dispose of old equipment at suitable collection points.
