easyfoam365+ Intake manifold ST-163.1

The 4-fold intake manifold ST-163.1 for all easyfoam365+ injectors

- Material: stainless steel.
- There is no need for changeover times caused by constant changing of suction hoses for media (cleaning agents).
- Individually controllable inlet hose barbs. A noticeable locking system shows that the selected hose barb is optimally positioned and activated.
- 4 sets of dosing nozzles including plugs are supplied, through which the suction volume of the media can be set in suction mode.
- No twisting of the hoses: The control takes place via a twisting part with marking. If the marking is between 2 colored hose barbs, the passage is blocked.
- With various accessories, the ST-163 intake manifold can be mounted on the wall or on a trolley. An adapter for direct mounting on the ST-167 and ST-168 injectors is also available.

4 sets of dosing nozzles included: The plugs can also simply be inserted into the hose barbs.

Intake manifold ST-163.1

Intake manifold for **easy**foam365 + injectors. 4 color-coded suction options. Control by turning the rotating part. Including O-ring and 4 sets of dosing nozzles
